

Session outline			
Title	Endoscopy 2		
Date & Time (Indonesia time)	16:00-17:30, Aug 13 (Wednesday), 2014 - Taiwan time at GMT +8		
Topic	GI Endoscopy Case Conference		
Style	Tele-conference		
System	Vidyo		
Brief description	Because of the unique quality of live imagery and various endoscopic skills that can be demonstrated in a rather simple manner and short duration of time, endoscopy is always a favourite session during medical teleconference. Projecting a live teleconference with good audio visual quality, minimal time lag together with the ability to deliver high quality video clip transmission are both interesting and challenging to the network engineers. With the advent of newer software such as the Vidyo system (H.264) which can utilize the commercial network and which is simple to install even on personal computer and mobile devices, more and more remote centers can be connected. Live discussion usually starts from case with an endoscopic video clip followed by questions and comments from assigned discussants. Other centers are also welcome to comment following that. It is thought that sharing of cases in this manner are both time and cost effective way of promoting sharing of experience among endoscopists from these regions
